# MATH 2170-19W Problem Set 7 

March 20, 2019
Due: in class, March 27, 2019
[8] Question 1. Recall that $\mathbb{Z}_{7}$ denotes the set $\{0,1,2,3,4,5,6\}$ together with the operations of addition and multiplication modulo 7 . Recall that every non-zero element of $\mathbb{Z}_{7}$ has a multiplicative inverse modulo 7 :

$$
1 \cdot 1 \equiv 1 \quad(\bmod 7), \quad 2 \cdot 4 \equiv 1 \quad(\bmod 7), \quad 3 \cdot 5 \equiv 1 \quad(\bmod 7,) \quad 6 \cdot 6 \equiv 1 \quad(\bmod 7)
$$

Consider the following system of congruences:

$$
\left\{\begin{aligned}
3 w+5 x+5 y+2 z & \equiv 1 \\
2 w+x+3 y+5 z & \equiv 4 \quad(\bmod 7) \\
2 w o d &
\end{aligned}\right.
$$

Using only the method of Gaussian elimination with back substitution, or the method of GaussJordan elimination, from first year Linear Algebra, [row reduction in matrix form, no column operations] and only arithmetic in $\mathbb{Z}_{7}$, find all solutions to this system. Give your solution in vector form.

## Question 2.

[2] (a) Find all Pythagorean triples where one of $x, y$, and $z$ is equal to 17 .
[2] (b) Find all primitive Pythagorean triples where $y=30$, if any.
[4] Question 3. Prove that if $\langle x, y, z\rangle$ is a Pythagorean triple, then one of $x, y, z$ is divisible by 3 , and one of $x, y, z$ is divisible by 5 .
[4] Question 4. $g=2$ is a primitive root modulo 19.

| $t$ | 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 | 10 | 11 | 12 | 13 | 14 | 15 | 16 | 17 | 18 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| $g^{t}$ | 2 | 4 | 8 | 16 | 13 | 7 | 14 | 9 | 18 | 17 | 15 | 11 | 3 | 6 | 12 | 5 | 10 | 1 |

Use this information to calculate the least residue modulo 19 of
(a) $4 \cdot 5 \cdot 7 \cdot 11 \cdot 15 \cdot 17$
(b) $12^{100}$
[20] TOTAL
